

- 01 - The gravity : a long distance force
- 02 - Potential Theory : general results
- 03 - The potential of spherical systems : general results
- 04 - Axisymmetric models for disk galaxies : potential of flattened and razor-thin systems
- 05 - Axisymmetric models for disk galaxies : potential from homoeoids
- 06 - Orbits in spherical potentials
- 07 - Orbits in axisymmetric potentials
- 08 - Nearly circular orbits
- 09 - Motions of stars in the Sun neighbourhood
- 10 - Orbits in planar non-axisymmetric potentials
- 11 - Orbits in planar non-axisymmetric rotating potentials
- 12 - Weak bars
- 13 - The collisionless Boltzmann equation
- 14 - The Jeans theorems : solutions of the CBE and symmetries
- 15 - Self-consistent spherical models with Ergodic DF
- 16 - Gaseous and stellar Polytropes
- 17 - Anisotropic DFs in spherical systems
- 18 - The Jeans Equations : motivations and derivation
- 19 - The Jeans Equations in spherical coordinates
- 20 - The Jeans Equations in cylindrical coordinates
- 21 - The Virial equation and Virial theorem
- 22 - Linear response theory : general developments
- 23 - The Jeans instability
- 24 - The stability of rotating disks : spiral structures
- 25 - The origin of spiral structures
- 26 - The Plummer model
- 27 - The Hernquist model
- 28 - The Isothermal sphere
- 29 - Surfaces of section in axisymmetric, non-axisymmetric and rotating potentials
