Chapter 1:

Basic Concepts in Learning Sciences
Examples of exam questions

① In the following learning environment, would the learner rather encounter problems due to cognitive load or to metacognition?

② What should you change in this learning environment to engage the learner into inductive reasoning?

Nuuk has a long history of habitation. The area around Nuuk was first occupied by the ancient pre-Inuit, Paleo-Eskimo people of the Saqqaq cultureas far back as 2200 BC when they lived in the area around the now abandoned settlement of Qoornoq.

For a long time, Nuuk was occupied by the Dorset culture around the former settlement of Kangeq but they disappeared from the Nuuk district before AD 1000. The Nuuk area was later inhabited by Viking explorers in the 10th century (Western Settlement), and shortly thereafter by Inuit peoples.

Lucie is the mother of Serge
Nadine is the daughter of Tristan

Who is the ant of Luc?
Cognitive load

Which statements are correct?

① Cognitive load prevents learning

② There is no learning without cognitive load

③ Cognitive over-load prevents learning

④ There is no learning without over-load
Cognitive Load ↔ Learning

Intrinsic Cognitive Load: some things are harder to learn

Extrinsic Cognitive Load: due to bad design

Germane Cognitive Load: the effort to create schemas
Cognitive Load: Type A

Example demonstrating split attention

Integrated example

In the above figure, find a value for Angle DBE

Solution:
Angle ABC = 180° - Angle BAC - Angle BCA (internal angles of a triangle sum to 180°)

= 180° - 55° - 45°
= 80°
Angle DBE = Angle ABC (vertically opposite angels are equal)
= 80°

Split Attention Effect

http://en.wikipedia.org/wiki/Split_attention_effect
Cognitive Load: Type B

\[ \sum_{n=0}^{N-1} a_n e^{-2\pi ink/N} = \sum_{n=0}^{N/2-1} a_{2n} e^{-2\pi i (2n)k/N} \]

\[ + \sum_{n=0}^{N/2-1} a_{2n+1} e^{-2\pi i (2n+1)k/N} \]

\[ = \sum_{n=0}^{N/2-1} a_{\text{even}} e^{-2\pi ink/(N/2)} \]

\[ + e^{-2\pi ik/N} \sum_{n=0}^{N/2-1} a_{\text{odd}} e^{-2\pi ink/(N/2)} , \]

« If the speed of light is incompressible then time is elastic »
« If the speed of light is incompressible then time is elastic »
2.2 Queries and Transformations on Sets

In this part, we are interested in functions used to make requests on elements of a set. The first function has the following signature:

```
def forall(s: Set, p: Int -> Boolean): Boolean
```

Note that there is no direct way to find which elements are in a set. `contains` only allows to know whether we have to iterate over all integers, testing each time whether it is included in the set, and if so, to do so in order to limit the search space.

1. Implement `forall` using linear recursion. For this, use a helper function nested in `forall`. Its structure should be:

```java
def forall(s: Set, p: Int -> Boolean): Boolean = {
  def iter(a: Int): Boolean = {
    if (p(a)) {
      if (a == s.getSize()) {
        true
      } else {
        iter(a + 1)
      }
    } else {
      iter(a + 1)
    }
  }
  iter(0)
}
```
Where is there more knowledge?

Storage Knowledge

Long Term Memory

The capital of Greenland is Nuuk

There are different types of knowledge
Knowledge Taxonomy

If you add some butter when boiling the water, the pasta do not glue to each other

Restricted relativity

The symbol for hydrogen is H

A square is a quadrilateral shape with 4 right angle and 4 isometric sides

The split attention effect refers to the increase of cognitive load due to the distance between a legend and the symbols used in the legend

Evolution (also known as biological, genetic or organic evolution) is the change in the inherited traits of a population of organisms through successive generations. This change results from interactions between processes which introduce variation into a population, and other processes which remove it. As a result, variants with particular traits become more or less common.

Brussels is the capital of Japan

The length of the hypotenuse is the square root of the sum of the squares of each other side of the triangle.

Problem solving

The learner has not the algorithm to compute the solution; this is a novel situation

The learner may combine segments of algorithm in a novel way
Heuristic knowledge
(Problem solving strategies)

• To solve a complex problem, decompose it into small simple problems
• Before to write the code, first thing about the data structure
• Orienteering: To reach the corner, select a drift-proof azimuth
• ...

**CS-411 Goals**

- **Reproduction**
  - Describe the learning processes triggered by a technology-based activity

- **Conceptualisation**
  - Explain how a technology feature influences learning processes

- **Application**
  - Elaborate a study that measures the learning effects of a digital environment

- **Exploration**
  - Select appropriately a learning technology given the target audience and the expected learning outcomes

- **Mobilisation**
  - Apply machine learning methods to educational traces
  - Design a learning environment based on orchestration graphs
Metacognition

An army bus holds 36 soldiers. If 1128 soldiers are being bused to their training site, how many buses are needed?

29% '31 remainder 12'
18% "31"
23% "'32,
30% did not do the computation correctly

USA National Assessment of Education Progress secondary mathematics exam, 45,000 students nationwide

Metacognition

• Knowledge about one’s own knowledge (e.g. “I am not good with numbers”, “I don’t understand”)

• Regulation of problem-solving: monitoring one’s own plan application (e.g. “If the equation becomes too long, it is not good”)
Transversal Skills

- Collaboration Skills
- Information appraisal skills
- Critical thinking skills
- Computational thinking skills
- Learning to learn
- Creativity
- Rigor

Transversal Skills

Are they domain-independent? Mostly, NOT

Can they be taught? Mostly, NOT

How can they be learned? Transversally
Transversal skills must be acquired transversally

- Collaboration Skills
- Information appraisal
- Critical thinking skills
- Computational thinking
- Learning to learn
- Creativity
- Rigor
Instructional design starts with:

What should learners **know** at the end?
(Which they did not know at the beginning)

What should learners **be able to do** at the end?
(Which they could not do at the beginning)

How will I know they are able to do it?

What would be the exam questions or tasks?
What should learners be able to do at the end?

Pedagogical Objectives

Learning Goals

Learning Outcomes
Instructional design works backwards:

What should learners be able to do at the end?
(which they could not do at the beginning)

What are they able to do at the beginning

Pre-Requisites
(CHAPTER 2)

Objectives
Prior Knowledge can be wrong

2 ice cubes at midnight, $t = 20^\circ C$

Which ice cube will melt faster?
Instructional design works backwards:

0-5 K  GR 1-12  UG GRAD  WORK  RETIREMENT

- Formal Learning Environments
- Informal Learning Environments

Informal learning is learning that occurs in daily life, in the family, in the workplace, in communities and through interests and activities of individuals.

Non-formal learning is learning that has been acquired in addition or alternatively to formal learning. In some cases, it is also structured according to educational and training arrangements, but more flexible. It usually takes place in community-based settings, the workplace and through the activities of civil society organisations.

Formal learning takes place in education and training institutions, is recognised by relevant national authorities and leads to diplomas and qualifications. Formal learning is structured according to educational arrangements such as curricula, qualifications and teaching-learning requirements.
Digital technologies blur the lines between formal and informal education.
